BE PREPARED SURVIVAL IS NO ACCIDENT

Have a plan and *practice*:

Make sure you and your loved ones know where you will go in the event of a tornado and have a tornado drill once a year

Have mattresses and thick blankets on hand in your shelter: FLYING DEBRIS ARE THE #1 CAUSE OF TORNADO-RELATED FATALITIES

DONT LET YOUR GUARD DOWN

Fall Severe Weather Preparedness Guide

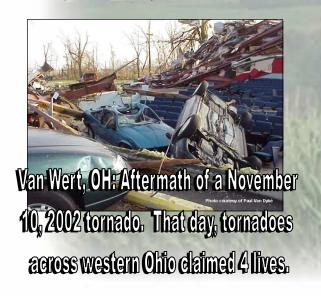

TORNADOES CAN OCCUR IN ANY SEASON

STARTLING FACTS:

Since 2001, 54% of severe tornadoes (EF3 and stronger) in our area have occurred in October or November

Since 2001, **every** tornadorelated fatality in the area has occurred in October or November

While late spring and summer are considered "peak" tornado season, tornadoes **CAN** and **DO** develop at *any* time of the year, particularly in the fall

STAY ALERT WITH NOAA ALL HAZARDS WEATHER RADIO

The fastest method of receiving Severe Weather Warnings and Watches

Weather Radio receivers are available at most electronic stores. Most can be programmed to sound an alarm only if an alert is issued specifically for your county

WHAT TO DO IF A TORNADO WARNING IS ISSUED FOR YOUR AREA OR YOU SEE A TORNADO

If at all possible:

Go to the basement or an interior room of a permanent building, no matter where you are

If you are in a car and the tornado is far away from you:

Determine which direction the storm is moving and drive out of its path

Nappanee, IN: Aftermath of an October 18, 2007 tornado.

If you are in a mobile home or car close to a tornado:

Get Out. If you can't find a permanent building, you are safer outside laying in a ditch or lowlying area with your arms covering your head
